

## CSC 210 Homework #5

It's due next class, Monday Feb 4.  
It's all worth uno punto.

What an easy homework... the notes homework.

I want some hours of your time this weekend. So:

1. Read Chapter 8; take copious notes, and bring them to class. We'll discuss some tree examples.
2. Read the Program #3 handout and start scribbling. Please bring the following items to class:
  - Your design notes and drawings from at least 2 hours of scribbling.
  - Start your code by creating a `Quadtree` class that implements my interface, `QuadtreeInt`. Place stubs in for methods and get your starting point to compile.
  - Your questions and ideas!

This is a fun assignment if you give it the proper attention. That's all folks.  
thanks... yow, bill
