Homework 11 - JavaFX toe/pool

Prof Bill - Mar 2020

Due: **Mon Mar 23, 2020**

I want everyone to dip their toe into the JavaFX pool this weekend.

thanks...yow, bill

Here's the assignment, and two cents on how I plan on doing things.

1) Find a JavaFX example online and try it yourself. Show your source as a comment.

- ❖ I like this tutorial because it has lots of examples,
  tutorials.jenkov.com/javafx/index.html.
- ❖ I like MenuBar because they're easy and fun,
  tutorials.jenkov.com/javafx/menubar.html.
- ❖ I'm only going to try a simple MenuBar, not all his complicated stuff.

2) Modify the code so that it has something to do with our P3, Wheel Gui.

- ❖ I'll make pretend menu items for my wheel.

3) Modify the code so that *something* happens when you click on your JavaFX thing. First, just print to System.out. Then, try something fancier.

- ❖ When a menu item is selected, I'll change a Label object or something.

4) On Monday, we'll share our results/screens over Zoom. (I think we can do that?) Keep it small. And fugly. We're just starting our trek up the JavaFX learning curve.

- ❖ Viva la Homework 11!
